Zurn Elkay - Admin Guide

Complete administration guide for managing the Zurn Elkay AEM Edge Delivery Services project.

This project uses AEM Edge Delivery Services with Universal Editor (crosswalk) authoring. Content is authored in AEM as a Cloud Service and delivered through the Edge Delivery Services pipeline. This guide covers Config Service setup, permissions and access control, Admin API operations, cache management, and code sync.

Quick Reference

Project Details

Item	Value
Organization	oharris69
Site	zurnelkay-eds-ue
Setup Type	Repoless (Config Service managed)
Authoring	Universal Editor / crosswalk (AEM as a Cloud Service)
Code Repo	oharris69/zurnelkay-eds-ue (GitHub)
Content Source	AEM Cloud author (author-p7954-e2285674.adobecloud.com)

URLs

Purpose	URL
Login	https://admin.hlx.page/login/oharris69/zurnelkay-eds-ue
Config Service	https://admin.hlx.page/config/oharris69/
Site Config	https://admin.hlx.page/config/oharris69/sites/zurnelkay-eds-ue.json
Preview	https://main-zurnelkay-eds-ue-oharris69.aem.page/
Live	https://main-zurnelkay-eds-ue-oharris69.aem.live/
Code Repo	https://github.com/oharris69/zurnelkay-eds-ue
AEM Author	https://author-p7954-e2285674.adobecloud.com/

Site

Site	Content Source	Preview	Live
zurnelkay-eds-ue	AEM Cloud author (markup delivery) author-p7954-e2285674.adobecloud.com/bin/franklin.delivery/oharris69/zurnelkay-eds-ue/main	https://main-zurnelkay-eds-ue-oharris69.aem.page/	https://main-zurnelkay-eds-ue-oharris69.aem.live/

Note: The oharris69 organization is a **repoless** Config Service org hosting many sites. This guide documents the zurnelkay-eds-ue site specifically. Administration of other sites in the org follows the same patterns with their own site name substituted.

Authentication

All Admin API operations require an auth token obtained by logging in with an Adobe ID that has access to the site.

Login

1. Open: <https://admin.hlx.page/login/oharris69/zurnelkay-eds-ue>
2. Sign in with your Adobe ID
3. Copy the auth token for API operations

Export the token for use in the commands below:

```
export AUTH_TOKEN="<your-auth-token>"
```

Logout

```
curl -X POST \  
  -H "x-auth-token: $AUTH_TOKEN" \  
  "https://admin.hlx.page/logout/oharris69/zurnelkay-eds-ue/main"
```

User Management

Access to this site is controlled by the access block in the site config. Current administrators (from the Config Service) are:

- oharris69@gmail.com
- oharris@adobe.com

Authentication requirement is set to `requireAuth: auto`.

View Current Access

```
curl -H "x-auth-token: $AUTH_TOKEN" \  
  "https://admin.hlx.page/config/oharris69/sites/zurnelkay-eds-ue/access.json"
```

Add User

Role	Command
Admin	POST /config/oharris69/sites/zurnelkay-eds-ue/access/admin.json with body {"users": ["email"]}
Author	POST /config/oharris69/sites/zurnelkay-eds-ue/access/author.json with body {"users": ["email"]}

Example:

```
curl -X POST \
  -H "x-auth-token: $AUTH_TOKEN" \
  -H "Content-Type: application/json" \
  -d '{"users": ["newadmin@example.com"]}' \
  "https://admin.hlx.page/config/oharris69/sites/zurnelkay-eds-ue/access/admin.json"
```

Remove User

```
curl -X DELETE \
  -H "x-auth-token: $AUTH_TOKEN" \
  "https://admin.hlx.page/config/oharris69/sites/zurnelkay-eds-ue/access/admin/{email}.json"
```

Content Operations

Content originates in AEM as a Cloud Service (Universal Editor). The Admin API preview and publish operations pull rendered markup from the AEM author content source and push it to the preview and live edges.

Preview

Operation	Endpoint
Single page	POST /preview/oharris69/zurnelkay-eds-ue/main/{path}
Bulk preview	POST /preview/oharris69/zurnelkay-eds-ue/main/*

Example:

```
curl -X POST \
  -H "x-auth-token: $AUTH_TOKEN" \
  "https://admin.hlx.page/preview/oharris69/zurnelkay-eds-ue/main/en/about-us"
```

Publish

Operation	Endpoint
Single page	POST /live/oharris69/zurnelkay-eds-ue/main/{path}
Bulk publish	POST /live/oharris69/zurnelkay-eds-ue/main/*
Unpublish	DELETE /live/oharris69/zurnelkay-eds-ue/main/{path}

Example:

```
curl -X POST \
  -H "x-auth-token: $AUTH_TOKEN" \
  "https://admin.hlx.page/live/oharris69/zurnelkay-eds-ue/main/en/about-us"
```

Cache

Operation	Endpoint
Purge path	POST /cache/oharris69/zurnelkay-eds-ue/main/{path}
Purge all	POST /cache/oharris69/zurnelkay-eds-ue/main/*

If a cache purge does not take effect, retry with `{"forceUpdate": true}` in the request body.

Code Operations

Code is hosted in the GitHub repo `oharris69/zurnelkay-eds-ue`. Pushes to `main` normally trigger an automatic code sync. Use the manual sync below if the edge does not pick up code changes.

Sync Code

```
curl -X POST \
  -H "x-auth-token: $AUTH_TOKEN" \
  "https://admin.hlx.page/code/oharris69/zurnelkay-eds-ue/main"
```

Common Tasks

Task	Steps
Add new admin	POST to /config/oharris69/sites/zurnelkay-eds-ue/access/admin.json with <code>{"users": ["email"]}</code>
Republish whole site	POST to /preview/oharris69/zurnelkay-eds-ue/main/*, then /live/oharris69/zurnelkay-eds-ue/main/*
Republish one page	POST to /preview/.../main/{path}, then /live/.../main/{path}
Clear all cache	POST to /cache/oharris69/zurnelkay-eds-ue/main/*
Deploy code changes	Push to main; if needed, POST to /code/oharris69/zurnelkay-eds-ue/main
Review who has access	GET /config/oharris69/sites/zurnelkay-eds-ue/access.json

Troubleshooting

Issue	Solution
401 Unauthorized	Token expired - login again at the login URL
403 Forbidden	Insufficient permissions - confirm your Adobe ID has admin/author role
404 Not Found	Check org/site/path spelling; confirm the page exists at the content source
429 Rate Limited	Wait and retry
Cache not clearing	Retry the purge with <code>{"forceUpdate": true}</code> in the body
Code not syncing	Manual sync: POST to /code/oharris69/zurnelkay-eds-ue/main

Issue	Solution
Preview shows stale content	Re-run preview for the path, then purge cache
Author changes not appearing	Confirm the AEM author content source is reachable, then re-run preview

Project-Specific Notes

- **Repoless organization:** oharris69 hosts 60+ sites through the Config Service. Always scope Admin API calls with the `zurnelkay-eds-ue` site name to avoid affecting other sites.
- **Universal Editor authoring:** Content is edited in AEM as a Cloud Service and delivered as markup. The Edge Delivery preview/publish steps pull from the AEM author content source rather than a document source (Google Drive/SharePoint) or `da.live`.
- **Content source host:** `author-p7954-e2285674.adobeaecloud.com`. Availability of this host affects preview/publish success.
- **Custom headers / CDN:** Check `/config/oharris69/sites/zurnelkay-eds-ue/headers.json` for any project-specific response headers before changing CDN or caching behavior.
