Zurn / Elkay - Author Guide

This guide is for content authors and content managers taking over the Zurn / Elkay site running on AEM Edge Delivery Services. This project uses the **AEM Universal Editor** (a crosswalk / "xwalk" project): content is authored inside AEM as a Cloud Service and delivered through Edge Delivery Services. It is **not** a Document Authoring (DA) or spreadsheet-based project, so authoring happens in the AEM Universal Editor rather than in Google Docs / Word / da.live.

Quick Reference

Resource	URL
AEM Author (Universal Editor)	https://author-p7954-e2285674.adobeaecloud.com/
Sites console (content root)	https://author-p7954-e2285674.adobeaecloud.com/sites.html/content/zurn
Assets (DAM root)	https://author-p7954-e2285674.adobeaecloud.com/assets.html/content/dam/zurn
Preview	https://main-zurnelkay-eds-ue-oharris69.aem.page/
Live	https://main-zurnelkay-eds-ue-oharris69.aem.live/
Block / Component Library	https://main-sta-xwalk-boilerplate-aemysites.aem.page/tools/sidekick/library.json
GitHub (code)	https://github.com/oharris69/zurnelkay-eds-ue

Site

Site	Content Source (AEM)	Preview	Live
zurnelkay-eds-ue	<code>/content/zurn</code> on <code>author-p7954-e2285674.adobeaecloud.com</code> (delivered via <code>franklin.delivery/oharris69/zurnelkay-eds-ue/main</code>)	https://main-zurnelkay-eds-ue-oharris69.aem.page/	https://main-zurnelkay-eds-ue-oharris69.aem.live/

The Config Service organization is **oharris69**. This is a single-site (standard) Edge Delivery setup. The content is mounted from AEM author markup, so the source of truth is the AEM Sites tree at `/content/zurn`, not a `da.live` folder.

Getting Started

Access Requirements

- ☐ AEM as a Cloud Service author access (request from your administrator)
- ☐ Membership in the appropriate AEM author group with edit rights on `/content/zurn`
- ☐ DAM (Assets) permission on `/content/dam/zurn` for uploading images/video

- ☐ Edge Delivery preview / publish permission (Config Service org oharris69)

Your First Page

1. Open the AEM Sites console and navigate to `/content/zurn/language-masters/en`.
2. Select an existing page (or create a new one under the correct language master).
3. Click **Edit** to open the page in the Universal Editor.
4. Use the **Components** panel (left rail) to drag blocks/components into a section.
5. Select any component to edit its fields in the **Properties** panel (right rail).
6. Fill in the page **metadata** (Page Properties) - title, description, etc.
7. Use the **Sidekick / Preview** to preview, then **Publish** to push to Edge Delivery.

Content Organization

Site Structure

The site tree lives under `/content/zurn`. Authors work in the **language masters**:

AEM Path	Delivered URL	Purpose
<code>/content/zurn/language-masters/en</code>	<code>/ and /en/</code>	English (source language) master
<code>/content/zurn/language-masters/fr</code>	<code>/fr and /fr/</code>	French master
<code>/content/zurn/configuration</code>	<code>/.helix/config.json</code>	Site configuration
<code>/content/zurn/metadata</code>	<code>/metadata.json</code>	Bulk metadata
<code>/content/zurn/redirects</code>	<code>/redirects.json</code>	Redirects
<code>/content/zurn/placeholders</code>	<code>/placeholders.json</code>	Placeholder strings
<code>/content/dam/zurn</code>	<code>(assets)</code>	Images, video, documents (DAM)

These path mappings are defined in `paths.json`. English is the source language master; other languages are derived from it.

Languages

The project is **multi-lingual**. Query indexes are configured for the following languages (see `helix-query.yaml`): **English (en)**, **French (fr)**, **Spanish (es)**, **German (de)**, and **Japanese (ja)**. English and French are the actively migrated masters. Product pages are English and shared across regions; only marketing, markets, resources, and news pages are truly localized per language.

Block / Component Library

In a Universal Editor project the **Components** panel (left rail of the editor) is where you browse and insert blocks. The set of insertable components is governed by `component-filters.json` (which components are allowed in each container) and defined by `component-definition.json` / `component-models.json`.

What	Details
Open in editor	Use the Components (+) panel on the left rail of the Universal Editor
Library reference	https://main--sta-xwalk-boilerplate--aemysites.aem.page/tools/sidekick/library.json
What's in it	All blocks listed in "Available Blocks" below, plus default components (Text, Title, Image, Button)
How to use	Drag a component into a section, or select a container and click + to add an allowed child

Container rules (from `component-filters.json`): a **Section** accepts blocks; blocks like Accordion, Cards, Carousel, Columns, Tabs accept their own child items (e.g. Accordion -> Accordion Item, Cards -> Card, Columns -> Column, Tabs -> Tab Item).

Available Blocks

Block	Purpose	Variants / Children	Usage
accordion	Expandable Q&A / disclosure list	Accordion Item children	FAQs, collapsible detail sections
action-button	Prominent call-to-action button	-	Standalone CTA
breadcrumb-product	Product breadcrumb trail	Crumb children	Product-detail pages
cards	Card grid	gradient; Card children	Feature/link card grids
cards-feature	Feature cards with richer layout	Feature Card children	Highlighted feature sets
cards-icon	Icon + text cards	Icon Card children	Value props, benefit lists
carousel	Generic slide carousel	Card children	Rotating content
carousel-hero	Full-width hero carousel	Hero Slide children	Homepage / landing hero
carousel-markets	Markets carousel	Market Card children	Markets landing
carousel-media	Media tile carousel	Media Tile children	Image/video galleries
columns	Multi-column layout	Column children (Text, Image, Button, Title, Video, DM)	General multi-column content
columns-band	Full-width banded columns	Band Cell children	Emphasis band rows
columns-product	Product-focused columns	Product Column children	Product detail layouts
columns-stat	Statistic columns	Stat Cell children	KPI / numbers rows
content-fragment	Renders an AEM Content Fragment	-	Reusable structured content

Block	Purpose	Variants / Children	Usage
download-list	Simple list of downloads	-	Document link lists
download-resources	Resource download grid	Resource children	Resources / support pages
dynamic-media-image / dynamic-media-image	Dynamic Media image (Scene7)	-	Optimized responsive imagery
dynamic-media-video	Dynamic Media video	-	Optimized streamed video
dynamicmedia-template	Dynamic Media template render	-	Template-driven DM assets
embed-adaptive-form	Embeds an AEM Adaptive Form	-	Registration / contact forms
find-a-doctor	Locator-style finder	-	Find-a-provider feature
forex	Foreign exchange rates	-	FX display (demo/utility)
form	Edge Delivery form block	Form field children	Native forms
fragment	Reuse another page fragment	-	Shared nav/footer/reused blocks
fragment-list	List of fragments	-	Aggregated fragment content
header	Site header / navigation	-	Global (do not place per page)
footer	Site footer	-	Global (do not place per page)
hero	Hero banner	hero-video, image-background-text-left/right, image-top/bottom/left/right, theme-dark, theme-light, removeunderline	Page hero / intro banner
hero-market	Market-specific hero	-	Market solution pages
iframe	Embedded external page	-	Third-party embeds
promotion	Promotional band	-	Promo / campaign callouts
quote	Pull quote / testimonial	-	Testimonials, highlighted quotes
search	Search box / results	-	Search experiences
separator	Visual divider	-	Spacing / section breaks
tabs	Tabbed content	Tab Item children	Grouped tabbed content

Block	Purpose	Variants / Children	Usage
tabs-audience	Audience-segmented tabs	Audience Item children	Audience-specific content
tabs-resource	Resource tabs	Resource Item children	Resource-type filtering
teaser	Image + text teaser	-	Promotional teasers
title-block	Styled section title	-	Section headings with styling
video	Inline video player	-	Standalone video

Default components (always available inside columns/sections): **Text, Title, Image, Button.**

Page Templates

This project migrated content into several **template families**. In a Universal Editor project the template is typically set via the AEM page template / page properties when the page is created, rather than a `template: metadata` line in a document. Known families in this project:

Template Family	Purpose
homepage	Site / language home pages
product-detail	Individual product pages (English, shared across regions)
market-solution	Markets / industry solution landing pages
about-us	About / company pages
campaign-landing	Innovation & efficiency campaign landing pages
press-release	News / press release articles
customer-success-story	Customer success stories
technical-resource	Technical resource detail pages
resources-hub	Resource listing / hub pages
specification-landing	Specification landing pages
support-page	Support content pages
registration-form	Registration / form pages
legal-text	Terms / legal / policy pages

When creating a new page, choose the AEM page template that matches the family, then fill in the required metadata (see Page Metadata below).

Configuration Sheets

Configuration is authored as AEM pages/resources and delivered as JSON (mapped in `paths.json`). Update the corresponding node under `/content/zurn` in AEM.

Sheet	AEM Source	Delivered As	Purpose	When to Update
Placeholders	/content/zurn/placeholders	/placeholders.json	Reusable text strings & translations	Changing labels, button text
Redirects	/content/zurn/redirects	/redirects.json	Forward old URLs to new URLs	After deleting / moving pages
Bulk Meta-data	/content/zurn/metadata	/metadata.json	Apply metadata to many pages by path pattern	Setting defaults by folder
Site Config	/content/zurn/configuration	/.helix/config.json	Site-level configuration	Rarely; admin task

Publishing Workflow

Environment	Domain	Purpose
Preview	main--zurnelkay-eds-ue--oharris69.aem.page	Test changes before going live
Live	main--zurnelkay-eds-ue--oharris69.aem.live	Production delivery

Workflow: Edit in the Universal Editor -> **Publish** (this pushes the page to Edge Delivery preview and live). After publishing, changes are delivered through the Edge Delivery pipeline. Use the Preview URL to verify before/while publishing.

Sections and Section Styles

Content is grouped into **sections**. In the Universal Editor, sections are containers you add via the Components panel; each section can be given a style through its section properties (mapped to a CSS class on the delivered page).

Available Section Styles:

Style	Effect
light	Light background treatment
dark	Dark background with light text (headings & paragraphs inverted)
highlight	Highlighted / emphasized background
bg-light	Light background fill
bg-dark	Dark background fill
bg-theme	Brand theme background
bg-image	Background-image section (image behind content)
section-has-bg	Marks a section that carries a background treatment

Page Metadata

Set these in AEM Page Properties; they are emitted as page metadata and used by the query index (`helix-query.yaml`) for listings and SEO.

Property	Required	Purpose	Example
<code>title</code>	Yes	Page title (SEO, nav)	"About Zurn"
<code>description</code>	Yes	SEO / social description	"Learn about Zurn..."
<code>og:title (navTitle)</code>	Recommended	Navigation / social title	"About Us"
<code>image (og:image)</code>	No	Social sharing image	<code>/content/dam/zurn/...</code>
<code>published-time</code>	For articles	Publish date (press releases, stories)	Tue, 09 Sep 2026 ...
<code>author</code>	For articles	Article author	"Zurn"
<code>content_type</code>	No	Content type for indexing	"product"
<code>cq-tags</code>	No	AEM tags for filtering	<code>zurn:markets/commercial</code>
<code>robots</code>	No	Indexing directives	<code>index, follow</code>

Images and Media

Method	How
AEM Assets	Upload to <code>/content/dam/zurn</code> in the Assets console, then reference from the Image / Dynamic Media components
Dynamic Media	Use <code>dynamic-media-image</code> / <code>dynamic-media-video</code> blocks for Scene7-optimized, responsive delivery
Content reference	Select assets via the asset picker in the Universal Editor Properties panel

Best Practices: Use descriptive filenames, always add alt text, keep assets under `/content/dam/zurn`, and prefer Dynamic Media blocks for large hero imagery/video so delivery is automatically optimized.

Common Tasks

Task	Steps
Create a Page	Sites console -> navigate to language master -> Create -> Page -> pick template -> Edit -> add sections/blocks -> set Page Properties -> Publish
Edit a Page	Open page in Universal Editor -> edit components in Properties panel -> Preview -> Publish
Delete a Page	Add a redirect first (<code>/content/zurn/redirects</code>) -> delete/unpublish page -> publish redirects
Update Navigation	Edit the header/nav fragment page -> Publish

Task	Steps
Update Footer	Edit the footer fragment page -> Publish
Add a Translation	Work in the target language master (e.g. /content/zurn/language-masters/fr) -> create/localize page -> Publish

Troubleshooting

Issue	Solution
Page not updating after publish	Wait 1-2 min for cache, hard refresh (Cmd/Ctrl+Shift+R)
Block not rendering	Confirm the component is allowed in that container (component-filters.json) and required fields are filled
Component missing from panel	It may not be permitted in the current container; add it to a Section or the correct parent
Images not showing	Verify asset is published from /content/dam/zurn and referenced correctly
Wrong template styling	Confirm the page was created from the correct template family
Metadata / listing wrong	Check Page Properties and bulk metadata (/content/zurn/metadata)
